SUMMARY

Computer Engineering student and full stack / AI systems developer experienced in mobile apps, web development, and LLM evaluation pipelines. Skilled in React Native, Flutter, Python, API integration, prompt engineering, and CI/CD automation. Seeking to contribute to impactful software and AI driven projects.

EDUCATION

Thakur College of Engineering and Technology, Mumbai <i>B.Tech in Computer Engineering CGPA: 9.30/10</i>	2024 - 2027
SVKM's Shri Bhagubhai Mafatlal Polytechnic <i>Diploma in Engineering 88.27%</i>	2021 - 2024
Cosmos High School, Maharashtra <i>SSC 78.00%</i>	2020 - 2021

INTERNSHIP

Front End Developer, Senkusha Solution LLP, Mumbai <i>Project: Tixito - Ticket Booking and Reselling App</i>	Jun 2023 - Aug 2023
- Developed a React Native app for ticket booking and resale, similar to BookMyShow, focusing on seamless UI/UX. - Implemented user friendly UI components including seat selection, booking flow, and real time availability updates. - Integrated RESTful APIs for handling ticket data, user actions, and backend communication. - Contributed to backend development for seat selection logic and ticket validation in collaboration with the team.	

ACADEMIC PROJECTS

Model Regression Detection Pipeline for LLM Powered Applications (CI/CD for LLM Behavior)	<i>Personal Project</i>
- Built an evaluation and regression detection pipeline for an LLM based email classifier, using an 80+ case golden dataset and a Python backend (Pydantic + asyncio) with multi dimensional LLM as judge scoring (accuracy, quality, latency, cost). - Implemented automated diffing between runs with a two tier severity system (warning/critical) and rolling drift detection to flag regressions and slow quality decay before production. - Automated the pipeline into CI/CD: GitHub Actions validates and evaluates every prompt change, blocks merges on critical regressions, and sends Slack alerts plus HTML reports, all containerized with Docker.	
Elixir - App to Find Nearby EV Charging Stations	<i>Academic Project</i>
- Developed a Flutter based mobile app to help EV users locate and navigate to the nearest charging stations using GPS and real time data integration. - Focused on UI/UX design and efficient map based navigation for an intuitive user experience. - Partially implemented a slot booking system allowing users to view available charging slots and initiate bookings.	

SKILLS

Mobile App Development: Flutter, React Native
Web Development: React, Next.js, HTML/CSS/JavaScript
Programming Languages: Python, C/C++
AI / LLM Engineering: Prompt Engineering, LLM Evaluation, LLM as Judge Scoring, OpenAI API, Pydantic
DevOps / Tools: Git, GitHub Actions, CI/CD, Docker, REST APIs
Other: Data Validation, Automated Testing (pytest), Regression Analysis

POSITIONS OF RESPONSIBILITY

Team Head - Spectrum Gaming Event	<i>SVKM's Shri Bhagubhai Mafatlal Polytechnic</i>
- Led the team in the Spectrum event, organizing and managing gaming competitions for the college fest. - Coordinated event planning, game selection, and participant engagement, ensuring a successful and well received event.
